The Office for Budget Responsibility was established to provide independent and authoritative analysis of the UK's public finances. Part of this role includes producing the official economic and fiscal forecasts. This report sets out forecasts for the period to 2015-16. The report also assesses whether the Government is on course to meet the medium-term fiscal objectives and presents preliminary observations on the long-run sustainability of the public finances. Since the June forecast, the UK economy has recovered more strongly than initially expected. The GDP

growth was greater than expected in both the 2nd and 3rd quarters, but that unemployment levels have risen to levels that the June forecast did not anticipate until the middle of 2012. In general the world economy has also grown more strongly. CPI inflation has remained slightly higher than expected in June, whilst public finances have performed as forecast. The interest rates on UK debt are lower than in June. The OBR forecasts that the economy will continue to recover from the recession, but at a slower pace than the recoveries of the 1970s, 1980s and 1990s. The publication is divided into 5 chapters with two annexes.

The challenge of global hunger is now high on the agenda of governments and international policy-makers. This new work contributes to addressing that challenge, by looking at the obstacles which stand in the way of implementing a right to food in the era of globalisation. The book describes the current situation of global hunger; it considers how it relates both to the development of food systems and to the merger of the food and energy markets; and it explains how the right to food contributes to identifying solutions at the domestic and international levels. The right to food, it argues, can only be realised if governance improves at the domestic level, and if the international environment enables governments to adopt appropriate policies, for which they require a certain policy space. The essays in this book demonstrate that the current regimes of trade, investment and food aid, as well as the development of biofuels production – all of which contribute to define the international context in which states implement such reforms – should be reshaped if national efforts are to be successful. The implication is that extraterritorial human rights

obligations of states (their obligations to respect the right to food beyond their national territories, for instance in their food aid, investment or trade policies), as well as the strengthening of global governance of food security (as is currently being attempted with the reform of the Committee on World Food Security in Rome), have a key role to fulfill: domestic reforms will not achieve sustainable results unless the international environment is more enabling of the efforts of governments acting individually. In this reform process, accountability both at the domestic and international level is essential if sustainable progress is to be achieved in combating global hunger. An excellent book for commerce students appearing in competitive, professional and other examinations. 1.Accounting : An Introduction, 2. Despite this, however, people continue to invest in them. How are we to account for the seemingly never-ending lure of such schemes? In providing answers to this central question, this concise and well-researched book examines how Ponzi schemes operate, how they differ from pyramid schemes, Ponzi finance and other financial arrangements. The author questions whether the victims have only themselves to blame, why fraudsters think that they can avoid detection, and what important insights behavioural finance theory and psychology can add. Particular attention is paid to the reasons behind the failure of financial regulation, and the types of regulatory changes needed to protect investors and avoid repetitions. The analysis is informed by case studies of 11 Ponzi schemes in the US, UK, Australia and New Zealand. Finance and business academics interested in the operation of Ponzi schemes, and how they differ from pyramid schemes, will find this book invaluable, as will students of economics, finance, behavioural decision-making and psychology. Lawyers, psychologists, regulatory agencies and financial institutions will also benefit considerably from the analysis. ACCA Approved and valid for exams from June 2017 up to 31 March 2018 -

This study considers some of the factors which led to the emergence of accounting in the structure and practices of industrial relations in one particular company over a substantial period of time. It addresses the question as to the roles accounting numbers and systems were called upon to play in the conduct of industrial relations. The book also examines the effects of accounting practice and discourses upon industrial relations and explores the nature of a reciprocal type of influence. The research is based upon the Manchester engineering firm of Hans Renold and focuses on the decision to introduce a profit-sharing scheme within the company in 1920. The study examines the origins of this managerial initiative and its subsequent performance over a 10 year period.
