The report describes research accomplished to aid the U.S. Army Infantry School in its systems engineering of the infantry officers advanced course curriculum. The research is focused on identification of the knowledge and skills and a study of thought processing of the battalion commander and his four principal staff officers. A survey of these officer activities was conducted in over 80% of all combat maneuver battalions, and data produced by a simulated battalion CPX are analyzed. (Author).

Computers and Thought showcases the work of the scientists who not only defined the field of Artificial Intelligence, but who are responsible for having developed it into what it is today. Originally published in 1963, this collection includes twenty classic papers by such pioneers as A. M. Turing and Marvin Minsky who were behind the pivotal advances in artificially simulating human thought processes with computers. "An engrossing and impossibly wide-ranging project . . . In *The Free World*, every seat is a good one." —Carlos Lozada, *The Washington Post* "The Free World sparkles. Fully original, beautifully written . . . One hopes Menand has a sequel in mind. The bar is set very high." —David

Oshinsky, The New York Times Book Review | Editors' Choice One of The New York Times's 100 best books of 2021 | One of The Washington Post's 50 best nonfiction books of 2021 | A Mother Jones best book of 2021 In his follow-up to the Pulitzer Prize–winning *The Metaphysical Club*, Louis Menand offers a new intellectual and cultural history of the postwar years. The Cold War was not just a contest of power. It was also about ideas, in the broadest sense—economic and political, artistic and personal. In *The Free World*, the acclaimed Pulitzer Prize–winning scholar and critic Louis Menand tells the story of American culture in the pivotal years from the end of World War II to Vietnam and shows how changing economic, technological, and social forces put their mark on creations of the mind. How did elitism and an anti-totalitarian skepticism of passion and ideology give way to a new sensibility defined by freewheeling experimentation and loving the Beatles? How was the ideal of “freedom” applied to causes that ranged from anti-communism and civil rights to radical acts of self-creation via art and even crime? With the wit and insight familiar to readers of *The Metaphysical Club* and his *New Yorker* essays, Menand takes us inside Hannah Arendt’s Manhattan, the Paris of Jean-Paul Sartre and Simone de Beauvoir, Merce Cunningham and John Cage’s residencies at North Carolina’s Black Mountain College, and the Memphis studio where Sam Phillips and Elvis Presley created a new music for the American teenager. He examines the post war vogue for French existentialism,

structuralism and post-structuralism, the rise of abstract expressionism and pop art, Allen Ginsberg's friendship with Lionel Trilling, James Baldwin's transformation into a Civil Rights spokesman, Susan Sontag's challenges to the New York Intellectuals, the defeat of obscenity laws, and the rise of the New Hollywood. Stressing the rich flow of ideas across the Atlantic, he also shows how Europeans played a vital role in promoting and influencing American art and entertainment. By the end of the Vietnam era, the American government had lost the moral prestige it enjoyed at the end of the Second World War, but America's once-despised culture had become respected and adored. With unprecedented verve and range, this book explains how that happened. "Here is the first Kant-biography in English since Paulsen's and Cassirer's only full-scale study of Kant's philosophy. On a very deep level, all of Cassirer's philosophy was based on Kant's, and accordingly this book is Cassirer's explicit coming to terms with his own historical origins. It sensitively integrates interesting facts about Kant's life with an appreciation and critique of his works. Its value is enhanced by Stephen Körner's Introduction, which places Cassirer's Kant-interpretation in its historical and contemporary context." --Lewis White Beck "The first English translation (well done by James Haden) of a 60-year-old classic intellectual biography. Those readers who know Kant only through the first Critique will find their understanding of that work deepened and illuminated by a long explication of the pre-critical

writings, but perhaps the most distinctive contribution is Cassirer ' s argument that the later Critiques, and especially the Critique of Judgment, must be understood not as merely applying the principles of the first to other areas but as subsuming the latter into a larger and more comprehensive framework. " --Frederick J. Crown, *The Key Reporter* "Kant ' s Life and Thought is that rare achievement: a lucid and highly readable account of the life and work of one of the world ' s profoundest thinkers. Now for the first time available in an admirable English translation, the book introduces the reader to two of the finest minds in the history of philosophy. " --Ashley Montagu

In Money, Language, and Thought, Marc Shell explores the interactions between linguistic and economic production as they inform discourse from Chretien de Troyes to Heidegger. Close readings of works such as the medieval grail legends, *The Merchant of Venice*, Goethe's *Faust*, and Poe's "The Gold Bug" reveal how discourse has responded to the dissociation of symbol from thing characteristic of money, and how the development of increasingly symbolic currencies has involved changes in the meaning of meaning. Pursuing his investigations into the modern era, Shell points out significant internalization of economic form in Kant, Hegel, and Heidegger. He demonstrates how literature and philosophy have been driven to account self-critically for a "money of the mind" that pervades all discourse, and concludes the book with a discomfiting thesis about the cultural and political limits of literature and philosophy in the modern world. *On Mind*

and Thought considers the enigmatic nature of the brain and mind, conditioned thought, and truly creative thinking. Krishnamurti's books have sold more than 200,000 copies. This book fulfils the need for a clear overview of this area of cognitive psychology which encompasses both language and thought. Focusing on goal directed thinking and decision making, Nick Lund looks at the relationship between our grasp of language and our problem solving abilities. Different positions on the issues are contextualised and discussed in a way suitable for the AQA-A A-Level syllabus. Supplementary detail means that the book will also be valuable to other A-Level specification candidates and undergraduates coming to this area for the first time. As a biblical motif, 'new creation' resonates throughout the pages of the Jewish and Christian scriptures, and occupies a central place in the apostle Paul's vision of the Christian life. Yet the biblical and extra-biblical occurrences of this theme vary widely in meaning, referring to either a new cosmos, a new community, or a new individual. Beginning with the Old Testament and working through the important texts of Second Temple Judaism, Moyer V. Hubbard focuses on how the motif functions in the argument, strategy, and literary structure of these documents, highlighting its role as the solution to the perceived plight. He then explores in detail which senses of the term Paul intends in Galatians 6.15 and 2 Corinthians 5.17, concluding that 'new creation' in Paul's letters describes the Spirit-wrought newness of the person in Christ, and is fundamentally anthropological

in orientation. An interrogation of the notion of space in Surrealist theory and philosophy, this study analyzes the manifestations of space in the paintings and writings done in the framework of the Surrealist Movement. Haim Finkelstein introduces the 'screen' as an important spatial paradigm that clarifies and extends the understanding of Surrealism as it unfolds in the 1920s, exploring the screen and layered depth as fundamental structuring principles associated with the representation of the mental space and of the internal processes that eventually came to be linked with the Surrealist concept of psychic automatism. Extending the discussion of the concepts at stake for Surrealist visual art into the context of film, literature and criticism, this study sheds new light on the way 'film thinking' permeates Surrealist thought and aesthetics. In early chapters, Finkelstein looks at the concept of the screen as emblematic of a strand of spatial apprehension that informs the work of young writers in the 1920s, such as Robert Desnos and Louis Aragon. He goes on to explore the way the spatial character of the serial films of Louis Feuillade intimated to the Surrealists a related mode of vision, associated with perception of the mystery and the Marvelous lurking behind the surfaces of quotidian reality. The dialectics informing Surrealist thought with regard to the surfaces of the real (with walls, doors and windows as controlling images), are shown to be at the basis of Andr e Breton's notion of the picture as a window. Contrary to the traditional sense of this metaphor, Breton's 'window' is informed by the screen paradigm, with its

surface serving as a locus of a dialectics of transparency and opacity, permeability and reflectivity. The main aesthetic and conceptual issues that come up in the consideration of Breton's window metaphor lay the groundwork for an analysis of the work of Giorgio de Chirico, René Magritte, Max Ernst, André Breton, and Joan Miró. The concluding chapter considers most philosophical theories of language have assumed that statements (products of assertion) and propositions (objects of belief) are the same things. John L. Pollock denies this, maintaining that even when the speaker is perfectly sincere, what he is thinking need not be the same thing as what he is saying. Originally published in 1982. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905. The scope and variety of interest areas identified with psycholinguistic research have grown enormously during the last decade or two. Although this recent flourishing has brought a great deal of new knowledge and interdisciplinary cooperation to the field, it has also brought its share of controversy and confusion as conflicting views on a number of important topics are hotly

debated by their proponents. It is for this reason that we have put together this book, a collection of interviews with a number of leading scholars within the field, all of whom differ--sometimes widely- in their respective points of view. The idea of using a uniform set of questions as points of departure for each interview seemed to us a choice method for providing readers with a better understanding of the complexities of the field. The questions we have chosen to work with are crucial questions for psycholinguistics since they form the framework for knowledge and research within the field. It is our hope that by offering several different points of view on psycholinguistic research, this volume will provide readers with a better sense of the similarities and differences of opinion within these different points of view. We would like to extend our thanks to the various contributors to this book for their cooperation and patience during the preparation of this book, and to the publishers for their steady encouragement during our work. Yi Hwang (1501–1570)—best known by his literary name, T'oegyŏ—is one of the most eminent thinkers in the history of East Asian philosophy and religion. His Chasŏngnok (Record of self-reflection) is a superb Korean Neo-Confucian text: an eloquent collection of twenty-two scholarly letters and four essays written to his close disciples and junior colleagues. These were carefully selected by T'oegyŏ himself after self-reflecting (chasŏng) on his practice of personal cultivation. The Chasŏngnok continuously guided T'oegyŏ and inspired

others on the true Confucian way (including leading Neo-Confucians in Tokugawa Japan) while it criticized Buddhism and Daoism. Its philosophical merit rivals T'oegeye's monumental *Sŏnghak sipto* (Ten diagrams on sage learning) and "Four-Seven Debate Letters"; however, as a testament of T'oegeye's character, scholarship, and teaching, the *Chasŏngnok* is of greater interest. The work engages with his holistic knowledge and experience of self-cultivation by articulating textual and historical material on various key doctrines and ideas. It is an inspiring practical guide that reveals the depth of T'oegeye's learning and spirituality. The present volume offers a fully annotated translation of the *Chasŏngnok*. Following a groundbreaking discussion of T'oegeye's life and ideas according to the *Chasŏngnok* and his other major writings, it presents the core of his thought in six interrelated sections: "Philosophy of Principle," "Human Nature and Emotions," "Against Buddhism and Daoism," "True Learning," "Self-Cultivation," and "Reverence and Spiritual Cultivation." The bibliography offers a current catalogue of primary sources and modern works in Korean, Chinese, Japanese, and English. As the first comprehensive study of the *Chasŏngnok*, this book is a welcome addition to current literature on Korean classics and East Asian philosophy and religion. By presenting T'oegeye's thought-provoking contributions, it sheds new light on the vitality of Confucian wisdom, thereby affording scholars and students with an excellent primary source for East Asian

studies in general and Confucian studies in particular. This book is an essay on how people make sense of each other and the world they live in. Making sense is the activity of fitting something puzzling into a coherent pattern of mental representations that include concepts, beliefs, goals, and actions. Paul Thagard proposes a general theory of coherence as the satisfaction of multiple interacting constraints, and discusses the theory's numerous psychological and philosophical applications. Much of human cognition can be understood in terms of coherence as constraint satisfaction, and many of the central problems of philosophy can be given coherence-based solutions. Thagard shows how coherence can help to unify psychology and philosophy, particularly when addressing questions of epistemology, metaphysics, ethics, politics, and aesthetics. He also shows how coherence can integrate cognition and emotion. Originally published in 1971, *Animals in Art and Thought* discusses the ways in which animals have been used by man in art and literature. The book looks at how they have been used to symbolise religious, social and political beliefs, as well as their pragmatic use by hunters, sportsmen, and farmers. The book discusses these various attitudes in a survey which ranges from prehistoric cave art to the later Middle Ages. The book is especially concerned with uncovering the latent, as well as the manifest meanings of animal art, and presents a detailed examination of the literary and archaeological monuments of the periods covered in the book. The book discusses the themes of

Creation myths of the pagan and Christian religion, the contribution of the animal art of the ancient contribution of the animal art of the ancient Orient to the development of the Romanesque and gothic styles in Europe, the use of beast fables in social or political satire, and the heroic associations of animals in medieval chivalry. Gesturing is such an integral yet unconscious part of communication that we are mostly oblivious to it. But if you observe anyone in conversation, you are likely to see his or her fingers, hands, and arms in some form of spontaneous motion. Why? David McNeill, a pioneer in the ongoing study of the relationship between gesture and language, set about answering this question over twenty-five years ago. In *Gesture and Thought* he brings together years of this research, arguing that gesturing, an act which has been popularly understood as an accessory to speech, is actually a dialectical component of language. *Gesture and Thought* expands on McNeill's acclaimed classic *Hand and Mind*. While that earlier work demonstrated what gestures reveal about thought, here gestures are shown to be active participants in both speaking and thinking. Expanding on an approach introduced by Lev Vygotsky in the 1930s, McNeill posits that gestures are key ingredients in an "imagery-language dialectic" that fuels both speech and thought. Gestures are both the "imagery" and components of "language." The smallest element of this dialectic is the "growth point," a snapshot of an utterance at its beginning psychological stage. Utilizing several innovative experiments he created and

administered with subjects spanning several different age, gender, and language groups, McNeill shows how growth points organize themselves into utterances and extend to discourse at the moment of speaking. An ambitious project in the ongoing study of the relationship of human communication and thought, *Gesture and Thought* is a work of such consequence that it will influence all subsequent theory on the subject. Filled with philosophical puzzles that have intrigued great minds of many nations for centuries, insoluble logical paradoxes and moral dilemmas, *This is Not a Book* provides an intellect workout that will force you to confront the consequences of your beliefs. *Metaphor and Thought*, first published in 1979, reflects the surge of interest in and research into the nature and function of metaphor in language and thought. In this revised and expanded second edition, the editor has invited the contributors to update their original essays to reflect any changes in their thinking. Reorganised to accommodate the shifts in central theoretical issues, the volume also includes six new chapters that present important and influential fresh ideas about metaphor that have appeared in such fields as the philosophy of language and the philosophy of science, linguistics, cognitive and clinical psychology, education and artificial intelligence. Essays in this volume seek to clarify the meaning of tragedy and the tragic in its many German contexts, art forms, and disciplines, from literature and philosophy to music, painting, and history. Tolomeo Fiadoni (1236-1327) was one of the most

important political theorists and historians of the Middle Ages. He was central to developing a theory for the practices of Northern Italian republicanism and was hostile to kingship, portraying it as despotic and inappropriate for virtuous and freedom-loving people. He was the first writer to compare Aristotle's examples of Greek mixed constitutions - Sparta, Crete, and Carthage - with the Roman Republic, the ancient Hebrew polity, the Church, and medieval communes, yet he remained a staunch defender of the absolute secular and spiritual monarchy of the pope. Blythe explores various tensions in Tolomeo's work that are often overlooked in scholarly treatments of him, and which derive from cultural preconceptions and the diverse influences on him: Aristotle, Augustine, apologists for papal power, his life in the Dominican Order, his educational experience with Thomas Aquinas, and his social position as a member of Northern Italy's ruling class. These factors exerted contradictory influences on Tolomeo and led him to a sometimes unsuccessful intellectual struggle for consistency. This book is the first full-length study of Tolomeo's thought and it gives full consideration not only to the political writings for which he is most known, but also to his historical and exegetical works. It is the companion to *The Life and Works of Tolomeo Fiadoni* (Ptolemy of Lucca). "A Thought is a Thought" simplifies the power of mindfulness into a rhyming book to provide children and parents with tools to combat negative thoughts. This book works to calm the mind of anyone

that suffers from anxiety and overthinking. The mantra empowers the reader to know their value is beyond the thoughts they have about themselves, building confidence for people of all ages. The refrain "a thought is a thought" was designed to be a relatable phrase that kids and parents can use to bring calmness and comfort. The purpose of the book is to help anxious children build confidence to understand thoughts are just thoughts, it's not who they are. Along with the story is practical activities to help children understand and calm their thoughts. From identifying thoughts, to breathing exercises, this book offers tactical solutions to open conversations about thoughts and feelings. "A Thought is A Thought, It's Not Me, It's Just Not." The goal of this book is to give children the tools needed to identify their thoughts, connect it with an emotion they are feeling and release the negativity through being present.

Erwin Schrödinger was a brilliant and charming Austrian, a great scientist, and a man with a passionate interest in people and ideas. In this, the first comprehensive biography of Schrödinger, Walter Moore draws upon recollections of Schrödinger's friends, family and colleagues, and on contemporary records, letters and diaries. Schrödinger's life is portrayed against the backdrop of Europe at a time of change and unrest. His best known scientific work was the discovery of wave mechanics, for which he was awarded the Nobel prize in 1933. Schrödinger led a very intense life, both in his scientific research and in his personal life. Walter Moore has written a highly readable

biography of this fascinating and complex man, which will appeal not only to scientists but to anyone interested in the history of our times, and in the life and thought of one of the great men of twentieth-century science. When Jean-Pierre Vernant first published *Myth and Thought among the Greeks* in 1965, it transformed the field of ancient Greek scholarship, calling forth a new way to think about Greek myth and thought. In eighteen essays--three of which, along with a new preface, are translated into English for the first time--Vernant freed the subject of ancient Greece from its philological chains and reread the questions of "muthos" and "logos" within multifaced and transdisciplinary contexts--of religion, ritual, and art, philosophy, science, social and economic institutions, and historical psychology. A major contribution to both the humanities and the social sciences, *Myth and Thought among the Greeks* aims to come to terms with a single, essential question: How were individual persons in ancient Greece inseparable from a social and cultural environment of which they were simultaneously the creators and products? Seven themes organize this stellar work--from "Myth Structures" and "Mythic Aspects of Memory and Time" to "The Organization of Space," "Work and Technological Thought," and "Personal Identity and Religion." A master storyteller, an innovative, precise, and original thinker, Vernant continues to change the narratives we tell about the histories of civilizations and the histories of human beings in their individual and collective identities. The aim of his introduction to the

English translation is not so much to justify this estimate as to indicate the relevance of Cassirer's Kant interpretation to contemporary philosophy in its renewed endeavor to understand Kant's position and in its varied reactions to it. What businessmen thought-or thought they thought-in the age of the "robber barons." "Brightly written and thoughtful...a stimulating integration of economic and social history."-Journal of American History. Reference to or quotation from someone's speech, thoughts, or writing is a key component of narrative. These reports further a narrative, make it more interesting, natural, and vivid, ask the reader to engage with it, and reflect historical cultural understandings of modes of discourse presentation. To a large extent, the way we perceive a story depends on the ways it presents discourse, and along with it, speech, writing, and thought. In this book, Beatrix Busse investigates speech, writing, and thought presentation in a corpus of 19th-century narrative fiction including Frankenstein, Jane Eyre, Wuthering Heights, Oliver Twist, and many others. At the intersection between corpus linguistics and stylistics, this book develops a new corpus-stylistic approach for systematically analyzing the different narrative strategies of discourse presentation in key pieces of 19th-century narrative fiction. *Speech, Writing, and Thought Presentation in 19th-Century Narrative Fiction* identifies diachronic patterns as well as unique authorial styles, and places them within their cultural-historical context. It also suggests ways for automatically identifying forms of

discourse presentation, and shows that the presentation of characters' minds reflects an ideological as well as an epistemological concern about what cannot be reported, portrayed, or narrated. Through insightful interdisciplinary analysis, Busse demonstrates that discourse presentation fulfills the function of prospection and encapsulation, marks narrative progression, and shapes readers' expectations. Von Balthasar presents one of the few serious studies available on the thought of one of the most important, and yet most neglected Fathers of the Church, Gregory of Nyssa. He was the most profound Greek philosopher of the Christian era, a mystic and an incomparable poet whom St. Maximus designated as the "Universal Doctor" and the Second Council of Nicaea declared him "Father of Fathers." This magisterial book is the first comprehensive interpretive and critical study of one of America's foremost philosophers and psychologists. Gerald Myers traces James's life and career and then uses this fresh biographical information to illuminate his writings and ideas. This volume provides a valuable contribution to our knowledge of eighteenth- and nineteenth-century intellectual life inside and outside Germany. —Prof. Karl S. Guthke, Harvard University This elegant collection of essays ranges across eighteenth and nineteenth-century thought, covering philosophy, science, literature and religion in the 'Age of Goethe.' A recognised authority in the field, Nisbet grapples with the major voices of the Enlightenment and gives pride of place to the figures of Lessing, Herder, Goethe and

Schiller. These eleven essays range widely in their compass of thought and intellectual discourse, dealing incisively with themes including the philosophical implications of literature and the relationship between religion, science and politics. The result is an accomplished reflection on German thought, but also on its rebirth, as Nisbet argues for the relevance of these Enlightenment thinkers for the readers of today. The first half of this collection focuses predominantly on eighteenth-century thought, where names like Lessing, Goethe and Herder, but also Locke and Voltaire, feature. The second has a wider chronological scope, discussing authors such as Winckelmann and Schiller, while branching out from discussions of religion, philosophy and literature to explore the sciences. Issues of biology, early environmentalism, and natural history also form part of this volume. The collection concludes with an examination of changing attitudes towards art in the aftermath of the 'Age of Goethe.' The essays in this volume have been previously published separately, but are brought together in this collection to present Nisbet's widely-acclaimed perspectives on this fascinating period of German thought. It will be of interest to scholars and students of the intellectual life of Europe during the Enlightenment, while its engaging and lucid style will also appeal to the general reader. When first published in 1923, this classic work took the psychological world by storm. Piaget's views expressed in this book, have continued to influence the world of developmental psychology to this day. This is

a collection of P.A. Brunt's writings on Greek history and thought--some previously published in journals and others unpublished until now. Subjects covered include Greek political history of the fifth century B.C. and ancient historiography--including an introduction to Thucydides designed for the more general reader, to which the author has now annexed a new study of Thucydides' funeral speech. Four essays concern the relationship between Greek philosophical thinking and social and political conditions, and of these, three, which constitute about a third of the volume, are new. Two examine the extent to which Plato and his pupils sought, or were able, to make any impact on the contemporary world, and the practicality of the model city in Plato's Laws; the third discusses Aristotle's theory of slavery in relation to the actual Greek institution and to other attempts to justify slavery as well as in the context of Aristotle's own ethical doctrines.
